

CREATING SLIDES

01 – Find Open Educational Resources

Start by searching for information on platforms like OER Commons, where authors share their materials freely, ensuring no copyright issues.

02 – Prepare Your Content

Summarize or extract the key points from the materials you've found. This will be the content for your slides.

03 – Generate Slides with ChatGPT

Provide the summarized content to ChatGPT and instruct it to create a structured outline for Google Slides, including titles, main points, and any specific instructions for slide design.

04 – Create App Script Code

After finalizing the slide structure, ask ChatGPT to generate a Google Apps Script code that can create these slides automatically.

05 – Execute in Google Apps Script

Open Google Apps Script, start a new project, and paste the code provided by ChatGPT. Run the script to auto-generate your slide deck.

06 – Edit and Customize

Once the slides are created, you can further edit and customize them in Google Slides according to your needs.
